SUMMARY

I have a Diploma in Electronics and communication Engineering with strong academic background and basic knowledge in digital/analog system. I can apply my knowledge and skills to contribute to the growth of the organization and enhance my professional experience in proficient. and I have experience in manufacturing department with ATP line in technical assembly and engine testing, and I have knowledge in Quality check department with a strong ability to interpret drawings and uphold quality standards, streamlining operations and onboarding processes

WORK EXPERIENCE

Cummins India Pvt. Ltd. – Tata Cummins Diploma engineer Trainee DET

June 2025 - June 2026

- Assembled ISB6.7, QSB6.7, and ISL9 engine platforms by interpreting technical drawings and using hydraulic torque tools to achieve exact torque and angle requirements.
- Conducted cold and hot testing of engines in the test cells, including leak detection, RPM stability, and oil pressure checks under supervision.
- Supported paint booth operations, including surface preparation, masking, and final painting, following company-defined process parameters for durability and finish quality.
- Performed basic quality checks using go/no-go gauges, digital torque tools, and visual inspection techniques; escalated non-conformities via standard reporting protocols.
- Ensured compliance with EHS standards, practiced SS on the shop floor, and performed routine tool calibration checks. Tools & Equipment Used: Hydraulic and Pneumatic Torque Wrenches Engine Test Cell Bench with HM chain Pulley & overhead crane system digital torque angle wrenches leak testing equipment, flow meters, Multimeters.

EDUCATION

• DIPLOMA IN ENGINEERING ELECTRONICS & COMMUNICATION ENGINEERING

June 2022– June 2025

GURU NANAK DEV DSEU CAMPUS

• 10th (CBSE BOARD)

2022

GOVT boys senior secondary school Mukundpur jantabihar

TECHNICAL SKILLS

- Basic Electronics
- Teamwork
- Time management
- embedded system
- problem-solving
- Computer knowledge
- Good Communication

PROJECT UNDERTAKEN

1. Minor project-01

* Fire alarm using 555 timer ic

1.Simple Circuit Design: A fire alarm circuit using a 555 timer IC is straightforward and cost-effective, often used for basic fire detection systems.

2.Thermistor-based Triggering: Typically, a thermistor (NTC) is used to detect temperature changes; when temperature rises, the 555 timer is triggered to sound an alarm.

2.Major project-01

* Arduino based multi-control car

Common Applications:*

1.Smart Home Automation: Control lights, security systems.

2. Robotics: Control robots or RC cars remotely.

3.IoT Devices: Manage devices like thermostats, cameras

CERTIFICATIONS

* Internship (Rajesh Electrical)

* Tata Cummins private Limited
